

Tahoe (L-150) connection

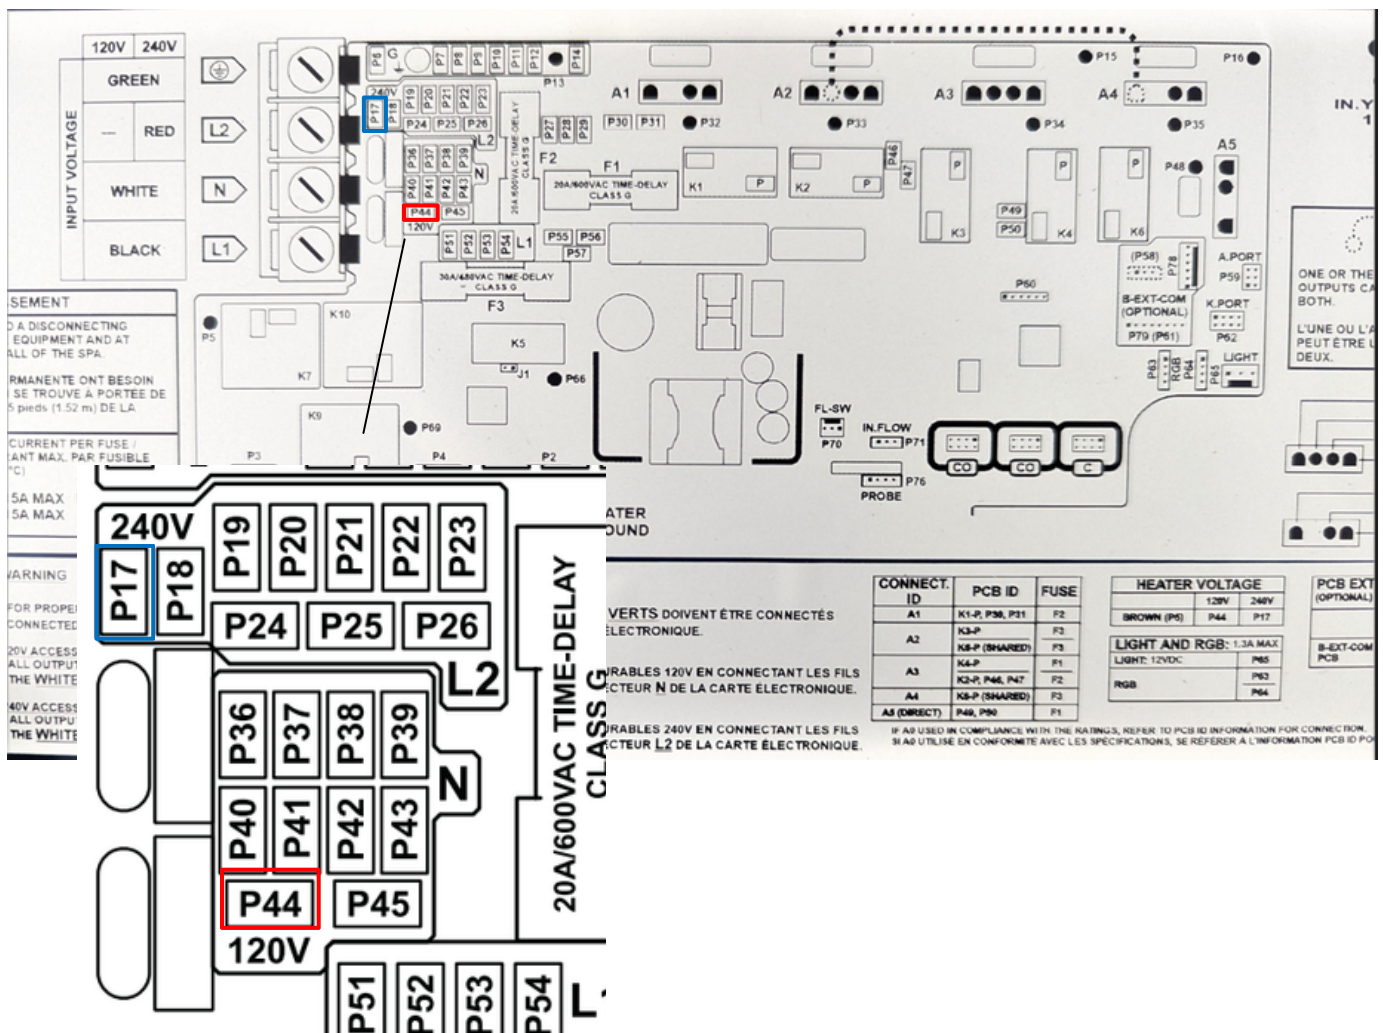

Factory connections:

When the hot tub is assembled at the factory, the XP2 pump (120 V), Balboa ozonator (120 V) and water heater (120v-240 V) are connected to 120 V.

Modification Connexions:

It is possible to convert ONLY the water heater connected to P44 by connecting it to P17 to obtain 240 V.

The XP2 pump (120 V) and Balboa ozonator (120 V) are NOT compatible with 240 V.

Warning

- We recommend that you consult an electrician for any electrical modifications.
- A 40-amp GFCI breaker is required for conversion.
- It is recommended to call a Spa technician to modify the programming in order to change the amperage of the spa from 15 amps to 30 amps so that the water heater can operate at the same time as the pump.
